

Mapping the global partnership for development

Investment and financial stability¹

Global context

Total Foreign Direct Investment (FDI) reached \$916bn in 2005, up by 29% over the 2004 level, but still considerably below the 2000 peak of \$1.4 trillion. Flows to developing countries comprised just over a third of this amount at \$334m, although the majority of this investment went to China, Hong Kong, Singapore and Brazil. FDI to Africa rose from \$17bn in 2004 to \$31bn in 2005, although again most of that was directed at a few countries – South Africa, Egypt and Nigeria. Most LDCs in Africa, with the exception of Sudan, received very little investment. Investment to South East Europe and the CIS countries was \$40bn; to West Asia \$34bn; to Latin America and the Caribbean \$104bn; and to South and South East Asia \$165bn (again skewed heavily by China and Hong Kong). Political declarations and communiqués on development have consistently emphasized foreign investment as a key driver of growth, competitiveness, technology transfer, and employment. The Monterrey Consensus stated that there was a need for 'the relevant international and regional institutions as well as appropriate institutions in source countries to increase their support for private foreign investment in infrastructure development and other priority areas, including projects to bridge the digital divide'.

Pathways to development

Notwithstanding the potentially strong potential linkages between increasing investment on the one hand, and faster economic growth and stronger employment on the other, most recent analyses of investment in developing countries have explored whether the quality of investment is supportive of sustainable development – including social and environmental provisions. More investment is not always seen as a good thing as it may not be job-creating, or it can also lead to corruption, the weakening of democratic structures, and financial instability.

As with the other global issues under study, the amount of foreign capital invested by the international community will depend on both domestic and international factors. Arguably the biggest drivers of FDI are domestic: access to credit, business entry regulations, the enforceability of contracts, property rights, the size of the market, the existence of natural or other resources representing market opportunities, skills of the workforce, and corruption. But international policies and actions also play a role. For example, the existence of double taxation treaties and the provision of political risk insurance can support increased investment flows. And the extent to which investment translates into sustainable growth, jobs and poverty reduction will also depend on whether governments do all they can to promote backward and forward linkages in the economy, invest in skills, tackle bribery, improve transparency, and encourage the respect of international treaties and conventions on human rights, labour and environmental standards.

¹ The use of the term investment in this template relates to Foreign Direct Investment (FDI) and not domestic investment. FDI includes both Greenfield investments, Mergers and Acquisitions (M&As) and portfolio investment where this exceeds the 10% equity threshold of the acquired firm.

The template below provides a way of mapping how international policies and actions impact on the quantity and quality of foreign investment.

Components of the model	Proxy indicators and data sources
<p><u>External Policies and Actions</u></p> <p>that impact on investment quantity:</p> <ul style="list-style-type: none"> - Supporting the provision of political risk insurance ▲ (global data) - Supporting double taxation treaties to prevent overseas investors from being taxed at home and in the destination country ▼ (local data) - Assistance provided to the country to secure sovereign credit ratings ▲▼ - Willingness to negotiate bilateral or regional investment treaties ▼ <p>that impact on investment quality:</p> <ul style="list-style-type: none"> - Willingness to tackle bribery ▲▼ 	<ul style="list-style-type: none"> • Eligibility of country X for coverage under political risk insurance programmes (MIGA, regional development banks, national agencies) <p><i>Data source: accessible via the Political Risk Insurance Center</i></p> <ul style="list-style-type: none"> • OECD members with whom Country X has a double taxation agreement • Non-OECD members with whom Country X has a double taxation agreement <p><i>Data source: Ministry of Finance</i></p> <ul style="list-style-type: none"> • International partners that have given assistance to Country X to secure a sovereign credit rating <p><i>Data sources: Surveys of bilateral donors, regional development banks, multilateral agencies and donors</i></p> <ul style="list-style-type: none"> • OECD members whose investment relationship with Country X is regulated by a bilateral or regional investment treaty • Non-OECD members whose investment relationship with Country X is governed by a bilateral or regional investment treaty <p><i>Data source: Ministries of Trade or Investment</i></p> <ul style="list-style-type: none"> • Proportion of the 10 largest investors in Country X (by country) that are signatories to the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions², and the proportion that have completed Phase 2 Monitoring to evaluate whether countries are effectively implementing national
